

Anonymised case note

Private investor-backed London property works

A private investor-backed property project required practical site delivery, clearer package coordination, communication with advisers and better records around live works, compliance questions and project progress.

MVB role

Mountain View Builders Ltd provided construction delivery support, site management, access coordination, package thinking, quotation support and practical issue resolution.

Owner-side control layer

Uriyel SiteWorks, operated under L. S. Severus & Co Limited, was used to support site visibility through check-in, risk acknowledgement, site notes, photo records and reporting logic. This layer should be presented separately from MVB construction delivery.

Transferable value

The proof is not the named client. The proof is the model: construction delivery plus documented site control plus owner-facing visibility. This is suitable for family offices, private client advisers, property managers, buying agents and London asset owners.

Public version: Do not name Chaing Equities, Cathay Investments or Ben without written permission. Use the anonymised wording above unless approval is confirmed.
